

## Omnipotent Void

Who is the Creator of this beautiful creation? Everything emerges from the Void. This earth, stars, planets and living kingdom, everything is in motion in The Great Void. Everybody is trying to fill up the Void while being immersed in the meditation of the Void. That primordial energy is moving forward to know its own being and that effort is being used for creations. The sun, moon, the planets, and stars are moving ahead from their respective positions to fill up the Void Space at their own pace. Our minds are moving ahead for the fulfillment of our own being. At the same time, the glands of the body, the molecules and atoms are getting stronger. The idea of filling the Void exists in every atomic and subatomic particle. This principle of filling up the Void, the feeling of satisfying hunger, the desire to awaken one's own being is innate in every living being. This motion is life or consciousness. The desire to fill the Void, the want to satisfy the desires, is the will power that exists in every subatomic particle of this universe. Thus, everyone is marching forward with full passion to fulfill The Great Void. Starting from the sun, moon, planets, and stars to all members of the living kingdom are following the same practice. This motion is trying to fill up the Void naturally as it doesn't need any special effort. We all are full to the brim, and that is why we are trying to fill-up everything. As the full potential of the supreme exists within every individual in full potency, we express our potential in many ways, that is why there is so much of desire, longingness, despondency, and despair. Because everyone has the desire to remain full, so, even after getting everything, there is so much despair. Both The Complete and The Void are moving in motion together as the day and the night. The Complete is moving and so is the Void. That is why even after receiving so much, the demand is not getting fulfilled. The Void has influence on every matter. Influenced by the Void, all matters are moving towards the Void. That is why if we analyze and synthesize any matter, it reaches the Void. There is no such progress or regress of the Void, in all conditions it remains at the same state, similarly, we all remain hanging in The Great Void through attachment and repulsion of the illusion of lust, desire and love having influence on us. Like Space, we also do not have birth or death, no ups and downs<sup>21</sup>.
