

Power of Silence

Silence is not merely defying external sources of sound but also reigning the tumult within. Our culture is now highly verbalized. The ability to understand something is directly proportional to the power to communicate with others. Even the greatest thinkers, in their very urge to explain something that is highly rich and fine to the underprepared and undeserving, dilute the content to such an extent that the original thought is lost. We learn speech from men and silence from God. True silence is defined as a state of absolute attainment. The person who holds the actual path becomes silent.
